Installation Procedures

System Requirements

For the Palm OS

- Palm OS® 3.1 and above or 4.0
- 2 MB of memory or more
- Minimum 100KB of free memory for program installation
- Desktop computer must have Palm Desktop and HotSync® applications

For Pocket PC

- Windows® CE 3.0
- 16 MB of RAM or more
- Minimum 1MB of free memory for program installation
- Desktop computer must have Microsoft ActiveSync application

Installation for the Palm OS

1. **Download** the PC-cillin for Palm OS **installation files** from the CD. **Decompress** the files **palm\$xxx.pdb** (where xxx is the version number) and **scan.prc** into the **Add-on folder** of your Palm Desktop directory (usually \Palm\Add-on). See Figure 1.

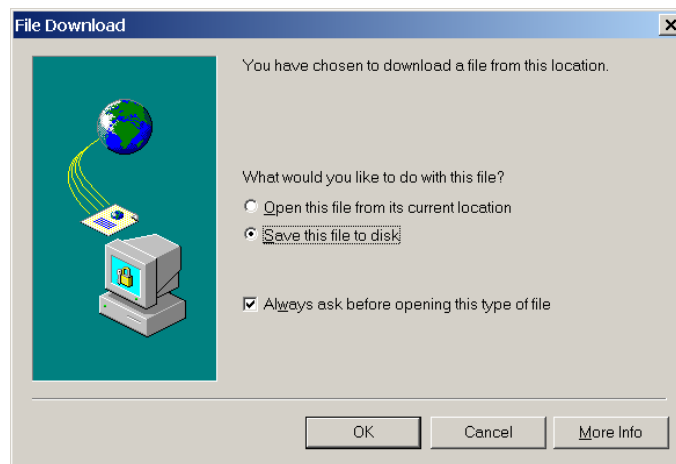

Figure 1. File Download window

2. **Open** up the **Palm Desktop** application, and then click the **Install** icon, Figure 2, to bring up the **Install tool dialog**.

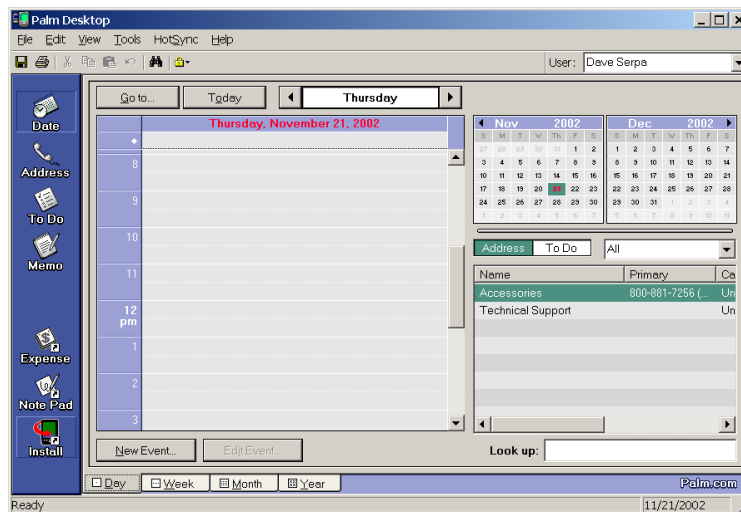

Figure 2. Install button – Palm Desktop

3. At the **Install Tool** window, Figure 3, click on the **User** drop down menu, and select the name that corresponds to your organizer.

Figure 3. The User drop down menu

4. Click the **Add** button, then multi-select **scan.prc** (main program), **Pattern_XXX.prc** (pattern file), and **RealTime.prc** (the real-time scan module) from the list box. Click **Open** (Figure 4) to add the files.

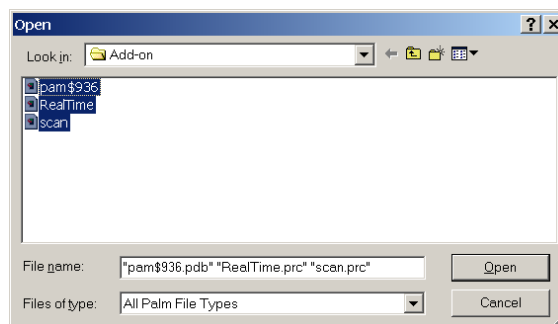

Figure 4. File selection window

5. The required files should appear in the list box in the **Install Tool** window, as shown in Figure 5. Click **Done**.

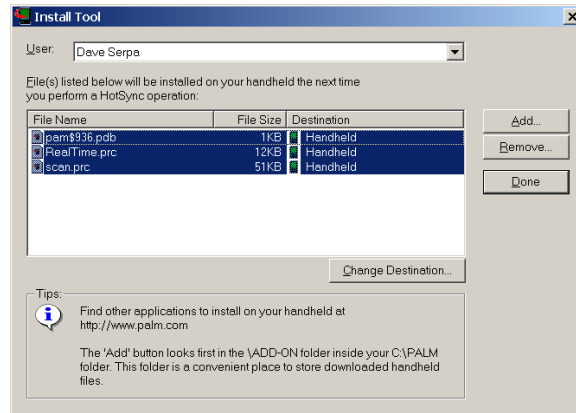

Figure 5. Install Tool window

6. An **Install Tool** dialog box, Figure 6, appears. Click on **OK** to proceed with installation during the next **HotSync** operation.

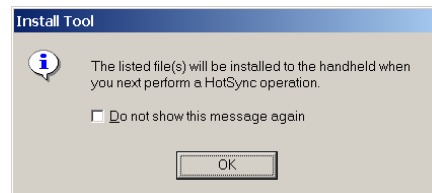

Figure 6. Confirmation dialog box

7. **Insert** your Palm OS platform device in the cradle and press the **HotSync** button on its **base** (See Figure 7).

Figure 7. HotSync Progress window

Installation for Pocket PC

1. Make sure the Pocket PC device **is connected** to the desktop and **Microsoft ActiveSync** is running.
2. **Download** the Pocket PC installation package, Figure 8, and **save** it in any convenient folder (e.g., c:\antivirus).

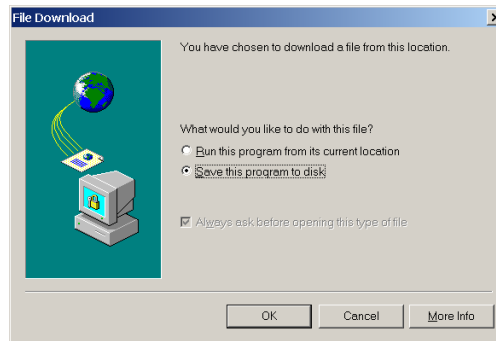

Figure 8. File Download window

3. **Open Windows Explorer**, and go to the folder where you saved the downloaded installation package. **Double-click** the package's icon (Figure 9).

Figure 9. Installation package icon

4. The **PC-cillin for Pocket PC - Installation Folder** window, Figure 10, opens. **Specify** the destination for the installation files. The default destination is the Windows **temp** directory. Click **Finish** to continue.

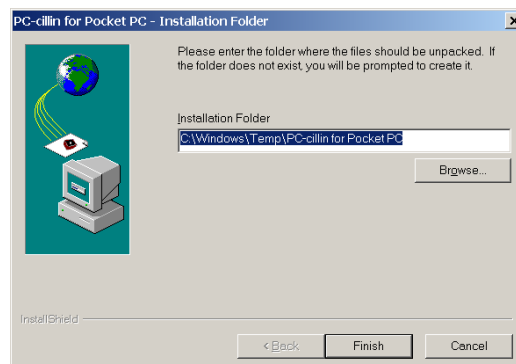

Figure 10. Installation folder window

5. The **Installing Applications** dialog box, Figure 11, opens. Click **Yes** to install PC-cillin in the default application directory, **No** to specify an alternative, or **Cancel** to abort the operation.

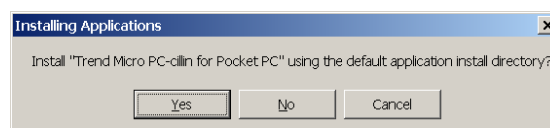

Figure 11. Installing Applications window
Configuring PC-cillin for Wireless

For the Palm OS

1. Go to the **Palm main screen** and make sure it is set to show **Utilities**.
2. Look for the **PC-cillin icon**, Figure 12, and **tap** it to start the program.

Figure 12. Palm main screen

Turning On Real-time Scanning (Palm OS Only)

Real-time scanning prevents you from accidentally activating a virus. Tapping the icon of a virus while this feature is enabled opens a warning message like the one in Figure 13.

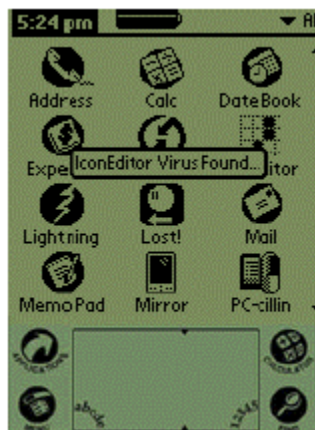

Figure 13. Real-time Scan warning message

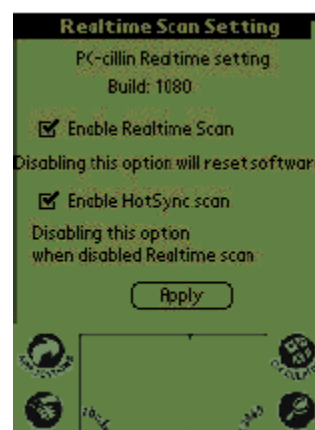

Figure 14. Real-time/HotSync Scan screen

This feature has its own separate user interface and a separate icon (See Figure 12). To enable it:

1. Go to the **Palm main screen** and make sure it is set to show all **Utilities**.

2. Tap the ***Real-Time*** icon to open the user interface.
3. Select **Enable Real-time Scan**, and then tap **Apply** (See Figure 14).

Note: Disabling this feature resets the PDA.

Turning On HotSync Scan (Palm OS Only)

The **HotSync Scan function** protects you from viruses that may attempt to infect your PDA during a HotSync. This feature uses the **Manual Scan** to detect harmful files. To activate this feature:

1. Go to the **Palm main screen** and make sure it is set to show **Utilities** (See Figure 12).
2. Look for the ***Real-Time*** icon, and **tap** it to open the user interface.
3. Select **Enable HotSync** scan then tap **Apply**. (See Figure 14)

Note: This feature requires the activation of Real-time Scanning. If Real-time Scan is disabled, this feature is automatically disabled.

For Pocket PC

1. Tap the **Start** icon in the **upper-left corner** of the screen. The Start menu appears (See Figure 15).

Figure 15. PC-cillin icon on start menu (PocketPC)

2. **Tap the PC-cillin icon** to start the program (See Figure 15).

Scanning for Viruses (all devices)

To **scan** for viruses, simply **tap** the **Scan** button (See Figure 16). After completion of the scan, you are shown a list of viruses that were found on your computer (See Figure 17).

Figure 16. PC-cillin start screen

Figure 17. Scan status

Dealing with Viruses (all devices)

1. There are **two actions** available if a virus is detected: **bypass** or **delete**.

Note: Delete all detected viruses!

Figure 18. Scan result screen

2. To delete all found viruses tap the **Del All** button (See Figure 18).

Updating the Virus Pattern

For Palm OS

1. **Download** the new version of the **pattern file**, a ***.pdb file**, into the **Add-on folder** on your desktop machine.
2. **Install** the new pattern file via the **Palm Desktop Installation**.
3. **Put** your Palm OS platform device **in the cradle** and press the **"HotSync"** button.
4. **Restart** the main program; it will automatically delete the old pattern file and load the new one.

Note: PC-cillin for Palm only checks for new pattern files when it is started.

For Pocket PC

1. **Download** the new version of the pattern file, which is the **slm\$vpn.xxx** file, into any convenient folder in your computer.
2. Use Windows Explorer on your computer to **copy** the new pattern file to the **My Device\Program Files\TrendMicro\PC-cillin for Pocket PC** folder of your device. **The device must be connected to your computer.**
3. PC-cillin for Pocket PC will **automatically** delete the old pattern file and load the **new pattern**. The program checks for updated patterns once every minute.
